

# ZERO WASTE-TO-LANDFILL SOLUTIONS

## BENEFITS

- Confidence promoting your Zero Landfill achievement
- Immediately improve your environmental footprint
- Avoid long-term environmental liability
- Turn-key solution

## WE CAN GET YOU ACROSS THE FINISH LINE

Whether your organization is just starting its zero waste-to-landfill journey or you're well down the road, Covanta can help. Our team of experts will work with you to identify "reduce, reuse, recycle" options for all of your production and manufacturing by-products. If you have anything left over, you can still get to your zero waste-to-landfill and other sustainability goals by directing your material to one of our 40 energy-from-waste (EfW) facilities located throughout North America. We also have logistics experts to help walk you through cost-effective options for containers and transportation.

## A GUARANTEE TO NEVER COMPROMISE YOUR ZERO LANDFILL COMMITMENT

While many providers claim they can help you avoid landfill disposal through energy-from-waste, none offer a guaranteed option that your materials will be accepted 100% of the time. Because we own and operate our EfW facilities, Covanta can guarantee capacity for your materials at one of our many EfW facilities.

Whether you're working with a third-party provider or going it alone, dealing directly with Covanta means you have an option that will never require you to compromise your zero waste-to-landfill commitment. Along with our no compromise option, we also provide official documentation certifying receipt and processing of your materials, providing you with absolute confidence when promoting your organization's Zero Landfill achievements.

## DID YOU KNOW?

According to the President's *Climate Action Plan*, landfills account for 18 percent of human-related methane emissions. The strategy of the plan is to take steps to cut methane emissions from landfills starting in Summer 2014. Less waste in landfills means fewer methane emissions.

## DIFFICULT TO HANDLE MATERIALS

Covanta is highly experienced with helping our customers find ways to manage their most challenging materials. Whether your materials are big and bulky or gooey and sticky, we can help you find a solution that makes disposing of them easier. We can help you with customized solutions for shredding, de-packaging, or resizing your materials so that maximum value is extracted prior to disposal. Our facilities are equipped to receive materials in a wide variety of containers and packaging including: bulk, boxed, drums, totes, bails, pallets, and slip sheets with easy unloading for transport trailers including: vans, self-unloading, end-dumps, and bulk tankers.

## IMMEDIATELY IMPROVE YOUR ORGANIZATION'S ENVIRONMENTAL FOOTPRINT

For those materials remaining after recycling, Covanta's EfW facilities offer one of the most accessible and environmentally sustainable Zero Landfill solutions you can find.

The materials you send us are used as fuel to generate clean, renewable energy. On average, our facilities perform 60-80% better than what is allowed by our permits and feature both ferrous and non-ferrous metal recycling. In addition, depending on your specific materials, EfW can offer significant greenhouse gas and other lifecycle benefits, resulting in significantly less environmental impact than if those materials were sent to a landfill. In some cases, renewable energy and carbon offset credits are also available.

## AVOID LONG-TERM ENVIRONMENTAL LIABILITY

Materials received at our facilities are normally processed within 24 hours by using an advanced combustion technology that exposes them to temperatures of approximately 2000° F. The result is molecular destruction of your materials with any residual rendered completely inert. This means that within 24 hours, your long-term environmental liability exposure is virtually eliminated. Contrast that to other disposal options that can expose you to extended liability such as landfills, where your materials can remain intact for hundreds of years.

## THE COVANTA DIFFERENCE

There are many companies that claim to offer EfW Zero Landfill services, but none can match the service and peace-of-mind you'll have from doing business directly with Covanta. Covanta is able to offer benefits others cannot, such as guaranteed acceptance of your materials and our official certification that your shipments were received and processed. Doing business with Covanta means you'll never have to compromise your Zero Landfill commitment, providing you with the confidence to promote your Zero Landfill achievements.
